

Fever

A scholar presenting to the health room with a temperature of 100.4° or higher (oral) may not remain in school. A parent should be called to pick up the scholar. Scholars with a fever are to remain home until **fever free at least 24 hours** without the use of a fever reducing medication.

Strep Throat

May Return To School: Scholar may return to school 24 hours after starting the antibiotic and 24 hours after the temp is normal (less than 100 °) without fever reducing medicines.

Conjunctivitis (pink eye)

May Return To School: when asymptomatic or until antibiotic treatment has been ongoing for 24 hours.

Diarrhea

May Return To School: The scholar should be excluded from school until the diarrhea has stopped for 24 hours.

Lice

The parent should be instructed to return to the health room (upon completion of treatment) with the scholar for clearance to return to school. Must have evidence of treatment (box/receipt/dr. note).

Vomiting

DO NOT bring your scholar to school if they have vomited at home in the past 24 hours. If the scholar is vomiting at school, the parent should be called and the scholar taken home. The scholar may return to school when they are well and symptom free or **after 24 hours** without vomiting. If vomiting is accompanied by fever, then the fever policy applies and the scholar may return to school when **fever free for 24 hours** (without fever reducing medication.)

Rash

For unidentified rashes/skin conditions, scholars are to be quarantined away from others and sent to a medical provider to diagnose and treatment. May return to school: **when scholar is rash free or has a note from a licensed health care provider** clearing scholar to return to school.
